How to Use This Packet:

Teaching symmetry can be fun, creative, and easy with this Symmetry Draw-It Packet!

Students LOVE completing Symmetry Draw-Its! Simply print and copy the page(s) of your choice and have students complete drawing the picture over the line of symmetry. I strongly suggest that students use pencil first, then retrace their lines with pens, crayons, or markers once they are sure they have drawn the lines correctly. Then, have students color in their picture.

The finished symmetrical drawings make a wonderful, eye-catching bulletin board!

Suggested Uses: Morning seatwork, math centers, small group work, independent work, challenge pages, or homework.
